Odoo ERP Demo | Dean Verstegen | Fox Cities Racquet Club

Invited Syed Mujeebur Rahman Manikanta Gajula Saleha HR
dean@foxcitiesracquetclub.com Sameer

Attachments 📅 Odoo ERP Demo | Dean Verstegen | Fox Cities Racquet Club

Meeting records 📄 Transcript 🎥 Recording

Summary

The session provided a comprehensive product demonstration and strategic review of business requirements for Odoo system implementation.

System Configuration and Capabilities

The session demonstrated core modules including accounting, point of sale, and booking management. Automated workflows were shown to streamline invoicing and member versus non-member operations.

Hosting and Technical Architecture

Participants reviewed hosting solutions and strategies for managing custom modules across system updates. The team emphasized utilizing existing documentation to minimize development costs.

Project Scope and Strategy

A decision was made to review the 72-page business requirements document to

finalize a cost projection. Discussions centered on choosing between hourly billing and fixed-price project models.

Decisions

Aligned

- **Hourly court rate setting** The hourly rate for court bookings is established at \$28.
- **POS product availability configuration** The point-of-sale system is configured to default products as available for sale instead of requiring manual selection.
- **Custom court dashboard implementation** The system development scope includes creating an interactive dashboard for court scheduling, modeled after the client's current Excel spreadsheet.
- **Business Requirements Document revision postponed** The Business Requirements Document revision is set to be postponed to facilitate immediate contract initiation.
- **Tentative pricing proposal preparation** A tentative proposal consisting of a ballpark estimate and hourly billing rates is set to be prepared for the client's board.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [Sameer] Configure POS Defaults: Set products as available for the point of sale system by default to ensure they are selectable during sales transactions.

- ☐ [Sameer] Design Website: Design a new company website within the Udo platform to replace the existing site if requested.
- ☐ [Sameer] Share Pricing Data: Provide information on hourly packages and associated costs to assist with decision-making.
- ☐ [Sameer] Draft Cost Document: Create an outline of licensing and hosting fees for the board of directors to review.
- ☐ [Dean Verstegen] Send HD Images: Provide high-definition images of the current court sheets to facilitate proper customization of the reservation system.
- ☐ [Sameer, Syed Mujeebur Rahman] Send Pricing Estimate: Draft and send a document containing the hourly billing rates and a ballpark project cost estimate to Dean Verstegen.
- ☐ [Syed Mujeebur Rahman, Sameer] Analyze Scope: Review the documentation regarding the project scope to facilitate a final estimation.

Details

- **UDO Interface and Company Settings:** Sameer introduces the UDO interface, providing an overview of the dashboard, company details, and user management settings ([00:00:01](#)).
- **System Initialization and Accounting Localization:** Sameer explains the email configuration and accounting settings. They have initialized the accounting module with United States localization and USD as the currency, noting that multiple currencies could be enabled if needed in the future ([00:01:06](#)).
- **POS Session and Quality Control Configuration:** Sameer creates a new point-of-sale shop and discusses system configuration options, such as rounding methods, margins, and cost tracking. They confirm that quality control checks are unnecessary for the business because the two staff members act as the quality assurance team ([00:02:15](#)).
- **Operational Settings and Calendar Sync:** Sameer confirms that the business does not utilize dropshipping. They explain that complex purchase order

approval workflows are not required due to the small team size and discuss synchronizing Google or Outlook calendars with UDO for meeting management ([00:03:13](#)).

- **Sales and Loyalty Program Overview:** Sameer explains how to enable margins, discounts, and loyalty programs. They confirm that gift cards and coupons are managed within the loyalty module ([00:04:30](#)).
- **Court Configuration and Billing Logic:** Sameer demonstrates the configuration of multiple courts. They explain the difference between "court per hour" billing and "per seat" bookings, setting up a sample court with a four-player capacity and a \$28 hourly rate ([00:05:42](#)).
- **Booking Dashboard Functionality:** Sameer shows the booking dashboard, where users can select dates, times, and specific equipment like ball machines. The system allows for booking either a full court or individual seats ([00:09:10](#)).
- **Booking Management and Validation:** Sameer explains the process for starting and ending a play session. They have implemented a 15-minute buffer validation to prevent users from starting bookings too early, ensuring accurate tracking for audit purposes ([00:11:36](#)).
- **Non-Member Booking Limits:** Sameer confirms that the system enforces a limit of three bookings per year for non-members. They demonstrate that the system provides real-time validation, blocking further reservations once this threshold is reached ([00:14:14](#)).
- **Membership and Seasonal Rates:** Sameer discusses membership plans and seasonal rates. Dean Verstegen notes that their current website is outdated and managed by an employee's spouse ([00:16:11](#)).
- **Website Hosting Costs:** Dean Verstegen states they pay \$12 per month for website hosting. Sameer explains that UDO provides integrated website hosting at no additional cost, which would allow them to consolidate their hosting expenses ([00:17:22](#)).
- **Configuration of Seasonal Pricing:** Sameer demonstrates how to set up seasonal pricing, such as higher entry fees or rental rates during peak periods like Christmas, which automatically adjust billing during the specified date ranges ([00:18:23](#)).

- **Membership Plan Configuration:** Sameer outlines the process for configuring membership plans, including adult and family options. They detail how to set pricing, such as a \$250 adult membership, and enable pro-rated billing ([00:19:38](#)).
- **Membership Management and Invoicing:** Sameer demonstrates how to manage members versus non-members. They show the workflow for enrolling a member and generating an invoice, where the system automatically calculates the pro-rated price based on the remaining days in the membership year ([00:21:55](#)).
- **Payment Processing:** Sameer explains that payments can be recorded directly within the system. They note that invoice payment statuses update automatically via scheduled actions ([00:23:52](#)).
- **Purchase Order Workflow:** Sameer details the purchase module, showing how to create quotations, select vendors, and track products. The system allows for vendor negotiations before confirming an order ([00:26:21](#)).
- **Inventory and Forecast Reporting:** Sameer demonstrates the inventory reporting features, showing how to view free stock and forecasted inventory based on incoming purchase orders ([00:29:00](#)).
- **POS Product Enablement:** Sameer explains that products must be manually enabled for point-of-sale use. They acknowledge a request from Dean Verstegen to customize the system so that products are enabled for POS by default in the future ([00:29:58](#)).
- **POS Transaction Workflow:** Sameer demonstrates the point-of-sale interface, including how to select products, use barcode scanners for automatic selection, and process cash payments ([00:32:03](#)).
- **POS Closing and Cash Reconciliation:** Sameer explains the register closing process, which involves counting the cash on hand to reconcile against system-calculated totals. The system generates reports on total sales for the day upon closing ([00:34:16](#)).
- **Gift Card Generation and Usage:** Sameer demonstrates how to generate gift cards with specific values and unique codes. They explain that these can be restricted to specific customers or set as anonymous, and that they can include conditions like minimum purchase amounts ([00:35:38](#)).

- **Coupon and Discount Conditions:** Sameer explains how to set specific rules for coupons, such as limiting the number of uses or requiring a minimum purchase amount (e.g., \$100). They demonstrate that the system automatically applies the discount once the cart value meets the set criteria ([00:41:26](#)).
- **Accounting and Bank Integration:** Sameer demonstrates the accounting menu, including managing invoices and bills. They explain that connecting a bank account allows the system to fetch transactions automatically for reconciliation ([00:46:26](#)).
- **Payment Provider Integration:** Sameer shows how to configure payment providers like PayPal, which allows the system to sync transactions and accept online payments directly ([00:49:07](#)).
- **Chart of Accounts and Migration:** Regarding migration from Sage, Sameer explains that existing account codes can be edited or new accounts created in UDO. They highlight that country-specific localization automatically configures default taxes and journals ([00:50:08](#)).
- **Reporting and Communication Modules:** Sameer showcases the reporting tools, including trial balances and ledgers. They also introduce the "Discuss" application, which facilitates internal team communication ([00:52:23](#)).
- **Custom Development Requests:** Dean Verstegen identifies a need for a custom court sheet dashboard. Sameer commits to building this feature after onboarding, using provided layout examples ([00:54:37](#)).
- **Final Booking Cycle Demonstration:** Sameer attempts to demonstrate the full booking cycle, including capturing start and end times to finalize billing. Despite technical interruptions due to internet connectivity, they confirm the workflow for recording actual usage times ([00:57:02](#)).
- **Odoo Booking and Invoice Workflow:** Sameer demonstrated the automated invoice workflow within the Odoo system, which links bookings directly to invoicing. The system is configured to handle specific rates, including a \$5 ball machine rental, a \$10 non-member entry fee, and approximately \$14 for hourly court charges, resulting in a total invoice amount of \$43 ([00:59:10](#)). This integration automates the process and eliminates the need for manual entries in the accounting tab ([01:00:29](#)).

- **Odoo Version Updates and Migration:** Sameer highlighted that Odoo releases new software versions annually and provides support for previous versions for three to four years. This structure prevents the system from becoming outdated. If a client decides to migrate to a newer version after several years, Odoo partners are available to facilitate the database migration process to ensure no data is lost ([01:02:34](#)).
- **Maintenance Costs for Custom Modules:** Dean Verstegen expressed concerns about potential recurring costs associated with updating custom-developed modules, such as the court booking system, when new Odoo versions are released ([01:03:39](#)). Sameer clarified that while there is no requirement to update to the latest version, the team would charge lower rates than other partners for future migrations because they developed the base module and possess the necessary knowledge to upgrade it efficiently ([01:04:47](#)).
- **Project Scope and Budget Constraints:** Dean Verstegen noted that the business requirements document (BRD) prepared for the project reached 72 pages, making it a larger project than initially anticipated. Dean expressed a preference for keeping custom development to a minimum to control costs and align with the existing infrastructure. Because this represents a significant expense, Dean needs an outline of projected costs to present to the board of directors ([01:06:33](#)) ([01:20:08](#)).
- **Hosting Solutions and Pricing:** Sameer and Syed Mujeebur Rahman detailed two hosting options: Odoo.sh and Deploy ERP ([01:07:43](#)) ([01:09:54](#)). For Odoo.sh, 50 GB of server capacity costs approximately \$811 per year, with an additional \$82 per month for a staging environment ([01:08:41](#)). Alternatively, the Deploy ERP platform was presented as a more affordable solution, costing less than half of Odoo.sh, with 20% discounts available for annual subscriptions ([01:09:54](#)).
- **Engagement Models:** Sameer outlined two ways to proceed: a fixed-price project model or an hourly billing package ([01:11:13](#)). With hourly billing, the team would handle configurations, training, and customizations as hours are consumed, offering the client flexibility without requiring a fully defined initial scope ([01:12:18](#)) ([01:26:59](#)).
- **BRD Sharing and Review:** Dean Verstegen shared the extensive 72-page BRD that documents current business workflows ([01:20:08](#)). Syed Mujeebur Rahman

and Sameer agreed to review this document to better understand the requirements for CRM, membership management, and scheduling, confirming that an updated version of the document is not required for them to initiate the contract process ([01:18:40](#)) ([01:22:00](#)).

- **CRM and Customer Communication:** Sameer clarified that while the demo did not cover all areas, modules for inventory management, payroll, and reporting could be configured ([01:22:00](#)). Regarding customer communication, Sameer explained that email campaigns are free to implement, whereas text messaging features would require purchasing credits from a third-party provider ([01:22:53](#)). Dean identified the integration of the court sheets and reservations with the billing system as the top priority ([01:24:53](#)).
- **Data Requirements:** Sameer requested that Dean provide high-definition images of the current paper-based court sheets to better understand the data structure. This information will enable the team to customize the Odoo system to accurately reflect existing operations ([01:25:55](#)).
- **Development Efficiency and Demo:** Sameer emphasized that the demo application was completed in approximately 16 business hours, showcasing the efficiency of their development process, which incorporates AI to accelerate workflows ([01:26:59](#)).
- **Finalizing Next Steps and Access:** Sameer and Syed Mujeebur Rahman provided Dean with the login credentials ("admin" for both username and password) for the demo system to facilitate a presentation to the board of directors ([01:30:28](#)) ([01:32:59](#)). The team committed to preparing a tentative proposal, including a ballpark estimate and hourly billing rates, to be sent to Dean within one or two days ([01:34:14](#)).
