1. Executive Summary

Purpose

This Business Requirements Document (BRD) defines the operational, functional, and technical requirements for implementing an integrated Enterprise Resource Planning (ERP) system for an indoor tennis facility using the Odoo platform. The objective of this project is to replace multiple disconnected software applications and manual business processes with a single, fully integrated solution that manages all major aspects of operations at Fox Cities Racquet Club (FCRC).

The completed system will serve as the central operating platform for the organization, providing a single source of truth for customer information, court scheduling, financial transactions, inventory, employee management, and operational reporting. Every department within the club will utilize the same database and business processes, eliminating duplicate data entry, reducing administrative workload, improving reporting accuracy, and enhancing the overall member experience.

Business Vision

Fox Cities Racquet Club seeks to operate with the efficiency and professionalism of a modern service organization while maintaining the personalized experience expected by its members. Technology should simplify daily operations rather than create additional administrative work.

The new ERP system will enable staff to perform all customer-facing and administrative functions from a unified interface. Whether a customer is booking a court, registering for an activity, purchasing merchandise, paying membership dues, or enrolling in a league, every transaction should be recorded within a single integrated system.

The organization also seeks to provide management with real-time visibility into business performance through comprehensive dashboards, financial reporting, and operational analytics.

Project Objectives

The implementation will pursue the following primary objectives:

- Establish a single centralized database for all customers, members, employees, vendors, products, and financial information.
- Provide electronic court scheduling for members, staff, tennis professionals, and league administrators.
- Automate recurring membership billing and customer invoicing.
- Integrate retail sales, inventory management, purchasing, and accounting into one workflow.
- Eliminate duplicate data entry across departments.
- Improve financial reporting through integrated accounting and real-time transaction posting.
- Streamline payroll processing and employee management.
- Improve customer service by providing staff with immediate access to necessary customer information.
- Increase operational efficiency through workflow automation and standardized business processes.
- Support future organizational needs without requiring replacement of core software systems.

Scope of the ERP Solution

The ERP implementation is expected to encompass all major operational functions of the facility, including but not limited to:

- Customer Relationship Management (CRM)
- Membership Management
- Court Scheduling and Reservations
- Private Lessons and Clinics
- League Scheduling and Administration

- Point of Sale (POS)
- Retail Inventory Management
- Purchasing and Vendor Management
- Accounts Receivable
- Accounts Payable
- General Ledger
- Payroll and Human Resources
- Reporting and Business Analytics
- Electronic Document Storage
- Customer Communications

Each module shall operate as part of a single integrated ecosystem, allowing information entered in one area of the system to be immediately available throughout the organization.

Guiding Principles

The implementation should adhere to the following guiding principles throughout the project:

Single Source of Truth

Customer information, financial records, inventory quantities, and scheduling information shall exist only once within the system. Duplicate records and redundant data entry should be eliminated wherever possible.

Integration Before Customization

Whenever practical, standard Odoo functionality should be configured before custom development is considered. Customizations should be reserved for operational requirements that cannot reasonably be achieved through configuration or existing modules.

Operational Simplicity

The system should simplify daily workflows for employees. Common tasks performed by front desk staff, instructors, and managers should require minimal clicks and minimal training.

Financial Accuracy

Every financial transaction should flow automatically into the accounting system without requiring duplicate entry or manual reconciliation. Sales, memberships, invoices, payroll, inventory purchases, and vendor payments should generate appropriate accounting entries automatically.

Scalability

The solution should support future expansion, including additional courts (e.g., tennis courts that double as pickleball courts), employees, programs, memberships types, and retail offerings without requiring fundamental redesign. The possibility of online court reservation functionality should also be taken into account.

Security

Users should have access only to the information necessary to perform their responsibilities. Financial information, payroll records, and sensitive customer data shall be protected through role-based permissions (e.g., Front Desk staff will need access to Scheduling and Point of Sale, but not Accounting module).

Data Integrity

Business rules should prevent invalid transactions, scheduling conflicts, duplicate customer records, inaccurate inventory counts, and incomplete financial transactions whenever possible.

Definition of Project Success

The project will be considered successful when the new ERP system enables employees to conduct daily operations entirely within the integrated platform while improving efficiency, reducing administrative effort, and increasing the accuracy of operational and financial information.

Upon completion, management should have real-time visibility into every significant aspect of club operations, including court utilization, memberships, customer activity, retail sales, inventory levels, financial performance, and overall business health.

The completed system should serve as the organization's primary operational platform for the next decade and provide a flexible foundation for continued growth, process improvement, and future technology integration.

2. Business Objectives

Overview

The implementation of the Odoo Enterprise Resource Planning (ERP) system is intended to improve every major operational area of FCRC through automation, integration, and standardization of business processes. The primary objective is not simply to replace existing software, but to create a unified operating platform that increases efficiency, improves customer service, strengthens financial controls, and provides management with accurate, real-time information for decision-making.

The business objectives outlined below establish the desired outcomes of the project and provide a framework for measuring the overall success of the implementation.

Business Objective 1: Establish a Single Source of Truth

The organization shall maintain one centralized database for all customers, members, employees, vendors, products, courts, financial transactions, and operational data.

Information entered into the system shall be immediately available to authorized users across all departments without requiring duplicate entry or synchronization between separate software applications.

Expected outcomes include:

- Elimination of duplicate customer records.
 - Consistent customer information across all departments.
 - Reduced administrative effort.
 - Improved reporting accuracy.
 - Simplified employee training.
-

Business Objective 2: Improve Customer Experience

The system shall provide a seamless and professional experience for members, guests, and program participants throughout every interaction with the club.

Customers should experience:

- Real time account activity/balance access
- More accurate billing.
- Quicker payment processing.
- Clear communication regarding schedules and account activity.

Employees should be able to answer customer questions using a single customer profile without switching between multiple software systems.

Business Objective 3: Automate Administrative Processes

Routine administrative activities should be automated whenever practical to reduce manual effort and minimize the potential for human error.

Examples include:

- Membership renewals.
- Recurring billing.
- Court Schedule creation and updating
- Invoice generation.
- Payment reminders.
- Financial posting.
- Payroll calculations.

Automation should reduce repetitive administrative work while increasing consistency and accuracy.

Business Objective 4: Improve Operational Efficiency

Daily operations should require fewer manual steps and less employee time while maintaining high levels of customer service.

Operational improvements include:

- Faster court reservations.
- Retail product entry and tracking
- Real-time inventory updates.
- Faster, more accurate Point of Sale process (e.g., barcode scanner)
- Automated financial posting.
- Reduced paperwork.
- Improved communication between departments.

Staff members should spend more time serving customers and less time performing administrative tasks.

Business Objective 5: Strengthen Financial Management

All revenue and expense activity shall be recorded within the ERP system, allowing financial information to be available in real time.

Management should have immediate visibility into:

- Revenue by department.
- Membership income.
- Lesson revenue.
- League revenue.
- Retail sales.
- Accounts receivable.
- Accounts payable.
- Cash flow.
- Profitability.
- Budget performance.

Financial reporting should no longer depend upon manual consolidation from multiple software systems.

Business Objective 6: Improve Inventory Accuracy

Retail merchandise, tennis supplies, office supplies, maintenance inventory, and consumable products shall be managed within a centralized inventory system.

The ERP shall provide:

- Accurate inventory counts.
- Automatic inventory adjustments following sales.
- Vendor history.
- Inventory valuation.

- Low-stock notifications.

Inventory accuracy should improve purchasing decisions while reducing stock shortages and excess inventory.

Business Objective 7: Enhance Scheduling and Facility Utilization

Court scheduling should maximize facility usage while maintaining fairness among members and supporting all club programming.

The scheduling system shall:

- Prevent scheduling conflicts.
- Support member booking rules (if/when online booking is implemented)
- Manage leagues, lessons, tournaments, and events.
- Track court utilization (identifying hours of private lessons, group lessons, league court time, open court time, etc).
- Support recurring reservations.
- Provide waiting lists when courts or private lessons are unavailable.

Management should have visibility into court usage patterns to support future programming and operational decisions.

Business Objective 8: Support Organizational Growth

The ERP platform should provide a scalable foundation capable of supporting future business growth without requiring replacement of core business systems.

The solution should accommodate:

- New instructional programs.
 - Expanded memberships.
 - Additional employees.
 - New retail products.
 - Expanded reporting requirements.
-

Key Performance Indicators (KPIs)

The following KPIs shall be used to evaluate the success of the ERP implementation.

These metrics should be measured prior to implementation to establish a baseline and reviewed at 90 days, 6 months, and 12 months following system go-live.

KPI	Target	Business Value
Duplicate customer records	Zero active duplicates	Ensures customer satisfaction and reporting accuracy.
Customer check-in time	Less than 30 seconds	Improves customer experience and reduces front desk congestion.
Court reservation transaction time	Less than 60 seconds	Increases operational efficiency and member satisfaction.
POS transaction time	Average of less than 45 seconds	Improves retail service and reduces wait times.
Membership renewal processing	100% automated	Eliminates manual invoicing and reduces administrative work.
Billing accuracy	Greater than 99.5%	Reduces billing disputes and improves customer confidence.
Inventory accuracy	Greater than 98%	Improves purchasing decisions and reduces inventory shrinkage.
Month-end financial close	Completed within 5 business days	Provides timely financial information for management.
Accounts receivable aging	Reduce invoices over 60 days by 50%	Improves cash flow and reduces collection efforts.
Payroll processing time	Reduce processing time by at least 50%	Improves administrative efficiency and reduces payroll errors.
Court utilization	Increase annual utilization by 10–15%	Maximizes use of club assets and increases revenue opportunities.
Administrative data entry	Reduce manual entry by at least 75%	Frees staff for higher-value customer service activities.

Reporting availability	Real-time dashboards available at all times	Enables faster operational and financial decision-making.
Customer account lookup	Less than 25 seconds	Improves front desk responsiveness.
System availability	99.9% uptime during business hours	Ensures reliable daily operations.
User adoption	95% of staff actively using the ERP within 90 days	Confirms successful implementation and training.

Continuous Improvement

The ERP system should not be viewed as a one-time implementation but as a long-term operational platform that evolves alongside the organization's needs.

Following implementation, management should establish a quarterly review process to evaluate KPI performance, identify opportunities for process improvement, prioritize future enhancements, and ensure that the system continues to support the strategic goals of the organization.

Future software enhancements should be prioritized based on measurable business value, improvements to customer experience, operational efficiency, financial performance, and staff productivity.

3. Current Challenges

Overview

Fox Cities Racquet Club currently utilizes a combination of independent software applications, manual processes, spreadsheets, and paper-based workflows to manage daily operations. While these systems have supported the organization over time, they require significant manual intervention, duplicate data entry, and reconciliation across departments.

These disconnected processes increase administrative workload, reduce operational efficiency, and limit management's ability to make timely, data-driven decisions. The purpose of this ERP implementation is to eliminate these inefficiencies by creating a fully integrated business management platform.

The following business challenges (BC) have been identified as primary drivers for this project.

BC-001: Disconnected Software Systems

The club currently relies on multiple software applications and manual processes to perform daily operations. Customer information, scheduling, accounting, point of sale, inventory, payroll, and reporting often exist in separate systems that do not share data automatically.

As a result, staff frequently enter the same information multiple times, increasing both labor costs and the likelihood of data inconsistencies.

Business Impact

- Duplicate data entry.
- Increased administrative workload.
- Greater opportunity for human error.
- Delayed access to accurate information.
- Higher training requirements for employees.

Desired Outcome

A single integrated ERP platform where information entered once is immediately available throughout the organization.

BC-002: Duplicate/Inaccessible Customer Data

Customer information is often maintained in multiple locations throughout the organization or in many cases is unavailable to employees needing access. Changes to addresses, phone numbers, email addresses, family relationships, or membership status are often unavailable to staff members due to disparate methods of collection/storage or the lack of a shared electronic platform.

This increases the likelihood of conflicting information and reduces confidence in customer records.

Business Impact

- Inconsistent customer information.
- Incorrect billing information (membership class, etc).

- Communication errors.
- Reduced customer service quality.

Desired Outcome

One centralized customer record serving as the authoritative source of customer information for every department.

BC-003: Manual Financial Reconciliation

Financial transactions generated by different systems require manual reconciliation before financial statements can be prepared.

Retail sales, membership revenue, lessons, leagues, inventory purchases, and payroll frequently require additional manual journal entries or spreadsheet manipulation.

Business Impact

- Time-consuming daily reports and month-end closing.
- Increased data entry and accounting workload.
- Greater potential for financial errors.
- Delayed customer billing and financial reporting.

Desired Outcome

Automatic financial posting from operational transactions into the general ledger with minimal manual intervention.

BC-004: Limited Reporting Capabilities

Because operational data exists in multiple systems, management reporting often requires manual compilation from several sources.

Generating reports on membership trends, court utilization, tennis revenue streams, retail performance, or customer activity can require exporting data into spreadsheets for analysis.

Business Impact

- Delayed management reporting.
- Limited operational visibility.

- Inconsistent report formats.
- Difficulty identifying business trends.
- Slower decision-making.

Desired Outcome

Real-time dashboards and standardized reports generated directly from the ERP system.

BC-005: Labor-Intensive Point of Sale Operations

The current retail sales process requires excessive manual effort and does not fully integrate with inventory management or accounting.

Staff may need to manually enter product information, pricing, discounts, or payment details, increasing transaction time and the potential for error.

Business Impact

- Longer customer wait times.
- Greater opportunity for pricing and inventory errors.
- Manual reconciliation of sales activity.
- Reduced operational efficiency.

Desired Outcome

A modern point-of-sale system utilizing barcode scanning, automated pricing, integrated payment processing, and immediate inventory updates.

BC-006: Inefficient Inventory Management

Inventory quantities are updated manually or through disconnected processes, making it time consuming for the Pro Shop Manager to manage retail stock.

Receiving merchandise, adjusting inventory, and tracking product movement require significant staff effort and often depend upon manual recordkeeping.

Business Impact

- Inventory discrepancies.
- Time-consuming physical counts.

- Inefficient purchasing decisions.

Desired Outcome

Real-time inventory management integrated with purchasing, point of sale, vendor management, and accounting.

BC-007: Paper-Based Customer Statements

Monthly customer account statements are currently generated, printed, folded, stuffed into envelopes, and mailed.

This process requires considerable staff time and incurs recurring costs for paper, printing supplies, postage, and mailing labor.

Business Impact

- High administrative costs.
- Delayed customer communication.
- Increased paper consumption.
- Manual processing effort.
- Slower payment collection.

Desired Outcome

Electronic statements delivered automatically by email, with customers able to view invoices, payments, and account balances through an online customer portal.

BC-008: Paper Court Schedules and Manual Reservation Management

Court reservations are managed using printed schedules or manual scheduling processes that require staff intervention to update availability.

Schedule changes, cancellations, and modifications may require multiple updates throughout the day and can increase the possibility of scheduling conflicts.

Business Impact

- Increased schedule creation workload and payroll cost.
- Expense of materials (Paper sheets, stickers, etc)

- Time consuming court utilization data collection.
- Delays in availability of future court schedules

Desired Outcome

A real-time electronic court scheduling system supporting online reservations, recurring bookings, automated conflict prevention, waitlists, and facility utilization reporting.

BC-009: Limited Visibility into Business Performance

Management lacks immediate access to key operational metrics necessary to monitor the health of the organization.

Important information—including daily revenue, membership trends, retail performance, court utilization, instructor productivity, outstanding receivables, and inventory valuation—often requires manual preparation before it can be reviewed.

Business Impact

- Delayed strategic decision-making.
- Limitations in operational oversight.
- Difficulty identifying emerging trends.

Desired Outcome

Executive dashboards providing real-time operational, financial, and customer performance metrics.

BC-010: Manual Membership Administration

Membership renewals, billing adjustments, status changes, and member communications require significant manual effort.

Business rules governing member privileges, discounts, guest access, and billing cycles are difficult to manage consistently across disconnected systems.

Business Impact

- Administrative inefficiency.
- Decreased flexibility in membership paradigms (e.g., monthly vs annual billings)
- Membership adjustment delays.

- Increased customer service inquiries.

Desired Outcome

Automated membership management with configurable billing rules, renewal workflows, member privileges, and integrated customer communications.

BC-011: Limited Process Standardization

Many operational procedures depend upon employee experience and institutional knowledge rather than standardized workflows.

As staff members change roles or leave the organization, consistency and efficiency can be affected.

Business Impact

- Longer employee onboarding.
- Inconsistent customer experiences.
- Increased dependency on key personnel.
- Difficulty documenting procedures.

Desired Outcome

Standardized workflows embedded within the ERP system that promote consistency, improve training, and reduce reliance on undocumented processes.

BC-012: Fragmented Customer Communications

Customer communications are currently managed through multiple independent channels and systems. Emails, text messages, account statements, lesson reminders, league announcements, membership renewals, promotional campaigns, and operational notifications are often created and distributed separately, requiring staff to maintain multiple contact lists and communication workflows.

As customer information changes, communication lists may not remain synchronized, increasing the likelihood that members receive outdated, duplicate, or inconsistent information. Staff must also spend considerable time determining which customers should receive specific communications.

Business Impact

- Duplicate or inconsistent customer communications.
- Time-consuming maintenance of email and contact lists.

- Increased likelihood of sending information to incorrect recipients.
- Difficulty targeting communications to specific customer groups.
- Limited ability to track communication history and customer engagement.
- Reduced effectiveness of marketing and member outreach.

Desired Outcome

The ERP shall maintain a centralized communication platform that utilizes customer information already stored within the system. Staff should be able to generate targeted communications based upon membership type, program participation, league enrollment, instructor assignment, customer status, or other predefined criteria.

The system should maintain a complete communication history within each customer profile and support automated notifications for invoices, payment confirmations, reservation confirmations, lesson reminders, cancellations, membership renewals, and other routine business events.

BC-013: Decentralized Document Management

Important business documents are currently stored in multiple physical and electronic locations, making retrieval difficult and increasing the risk of lost or outdated information.

Examples include:

- Membership agreements.
- Liability waivers.
- Employment documentation.
- Vendor contracts.
- Incident reports.
- Equipment warranties.
- Maintenance records.

Staff frequently spend unnecessary time locating documents, and there is no consistent method for associating documentation with the related customer, employee, vendor, invoice, or transaction.

Business Impact

- Time-consuming document retrieval.

- Duplicate document storage.
- Increased paper usage.
- Difficulty verifying historical information.
- Greater risk of misplaced or outdated documents.
- Inconsistent document retention practices.

Desired Outcome

The ERP shall provide centralized electronic document management with the ability to attach documents directly to customer records, employee files, vendors, invoices, purchase orders, inventory items, maintenance requests, and other operational records.

Documents should be searchable, securely stored, and accessible based upon user permissions while maintaining appropriate document retention and version control.

BC-014: Dependence on Paper-Based Forms and Manual Workflows

Numerous operational processes continue to rely on printed forms, handwritten approvals, and manual routing of documents between departments.

Examples include:

- Membership applications.
- Liability waivers.
- Lesson registration forms.
- Refund requests.
- Purchase approvals.
- Employee onboarding documents.
- Incident reports.
- Vacation requests.
- Internal authorization forms.

Paper-based workflows increase processing time, require manual filing, and make it difficult to monitor the status of requests.

Business Impact

- Increased administrative labor.
- Slower approval processes.
- Greater opportunity for lost or incomplete paperwork.
- Duplicate data entry.
- Increased printing and storage costs.
- Difficulty tracking request status.

Desired Outcome

Business workflows should be digitized whenever practical through electronic forms, automated approvals, document routing, electronic signatures where appropriate, and real-time workflow tracking.

Employees should be able to submit requests electronically, while managers should have visibility into pending approvals and completed transactions through the ERP system.

BC-015: Dependence on Institutional Knowledge

Many daily operating procedures rely heavily upon the experience and knowledge of long-tenured employees rather than documented, standardized business processes.

Critical operational knowledge—including billing procedures, scheduling practices, membership exceptions, reporting methods, inventory processes, and financial workflows—may reside primarily with a small number of individuals.

As staffing changes occur, this dependence creates operational risk and increases the time required to train new employees.

Business Impact

- Longer onboarding and training periods.
- Inconsistent execution of business processes.
- Reduced operational continuity during staff turnover.
- Increased dependency on key personnel.
- Difficulty documenting and improving workflows.
- Greater risk of service disruptions.

Desired Outcome

Business processes should be standardized and embedded within the ERP system through configurable workflows, documented procedures, role-based permissions, automated business rules, and standardized reporting.

The organization should be able to train new employees using documented system processes rather than relying primarily on informal knowledge transfer, ensuring consistency, continuity, and long-term operational resilience.

4. Current State Business Process Overview

Purpose

This section documents the primary business processes (BP) currently used to operate the facility. The objective is to provide the Odoo implementation team with a clear understanding of how work is currently performed at FCRC, where information originates, how departments interact, and where inefficiencies exist. The following are broad descriptions of how we meet our basic business functions:

Function	Current System
Retail sales transaction (POS)	Manual product/service write-up and price calculation
Financial posting	Sage Accounting software
Inventory tracking	Sage Software with manual counting
Electronic payment processing	Dajavoo P1 Desktop POS Terminal
Customer transaction documentation	Carbon copy receipts

The descriptions contained below specifically delineate the FCRC's current operating models ("As-Is" state). These processes will serve as the basis for designing future-state workflows within the Odoo ERP system.

Each business process identifies the primary participants, major activities, current challenges, and opportunities for improvement through system integration and automation.

BP-001: Member Registration and Account Creation

Purpose

To establish a new customer account, create membership records when applicable, collect required documentation, and enable the customer to participate in club activities.

Primary Participants

- Prospective Member
- Front Desk Staff
- General Manager

Current Process

A prospective member visits the club or calls by telephone with a membership inquiry.

Front desk staff manually collect customer information including contact information, household members, membership type, and other required details.

Membership applications are completed using paper forms or separate electronic documents. Liability waivers are currently NOT collected.

Customer information is entered into Sage accounting software when their account is created in our system. Sage serves as the primary source of information, with paper membership application forms sometimes available as back-up.

Membership billing information is limited to the contact information (name, address, phone number) provided on the membership application. Payment information is NOT collected.

Once complete, the customer becomes eligible to reserve courts, register for programs, and make purchases, most often through an in-house charge account that is billed early the following month.

Current Challenges

- Customer information is often unavailable to desk staff.
- Paper forms require manual filing.
- Customer records may become duplicated.
- Historical documents are stored separately from customer records.

Opportunities for Improvement

The ERP should create a single customer profile containing all personal information, membership details, family relationships, billing information, signed documents, communication history, and activity records.

Membership activation, billing setup, and customer communications should occur automatically through standardized workflows. Contact information (but not payment information if collected) should be available to desk staff.

BP-002: Membership Billing and Account Maintenance

Purpose

To maintain active memberships, process recurring billing, manage account changes, and ensure customers remain in good standing.

Primary Participants

- Front Desk Staff
- Accounting Staff
- General Manager

Current Process

Membership billing is processed according to annual billing cycles, with the membership year running from September 1 through the following August. Members joining during that 12-month period are billed on a pro-rated basis (e.g., a member joining in January would be charged for an 8-month membership).

Memberships are automatically renewed for the following membership year at the end of July via hand-written invoices [Endnote i](#). Members who wish to cancel then have the cost of the next year's membership credited back to their account (again, via a hand-written invoice).

Customer statements are printed and hand delivered or mailed each month.

Payments received through cash, check, or credit card are manually applied to customer accounts.

Staff investigate billing discrepancies as they arise.

Current Challenges

- Manual review of recurring billing.
- Printed monthly statements.
- Manual payment application.
- Delayed account updates.
- Administrative effort associated with billing corrections.

Opportunities for Improvement

Recurring memberships should invoice automatically.

Electronic statements should replace printed statements.

Online payment options should automatically update customer accounts.

Membership status should update in real time.

BP-003: Court Reservations and Scheduling

Purpose

To manage court availability in an efficient, cost-effective manner that is easy to understand and modify for desk staff.

Primary Participants

- Members
- Front Desk Staff
- Tennis Professionals
- General Manager

Current Process

Court reservations are primarily managed through paper-based court sheets [Endnote ii](#) and manual scheduling procedures.

Reservations are accepted in person or by telephone.

Front desk employees manually review court availability before assigning courts.

Schedule changes require additional manual updates.

Lesson schedules, league schedules, maintenance closures, tournaments, and member reservations must all be coordinated manually.

Staff monitor reservation conflicts throughout the day.

Current Challenges

- Paper-based schedules.
- Significant manual scheduling effort.
- Limited reporting on court utilization.
- Tedious hand-written invoicing of on-court activities

Opportunities for Improvement

An electronic scheduling platform should provide direct invoicing of court time and lessons, real-time court availability, conflict prevention, recurring reservations, instructor scheduling, and comprehensive court utilization reporting. Online reservations are a functionality we are also entertaining for the future.

BP-004: Front Desk Customer Service

Purpose

To provide efficient, accurate, and professional customer service while serving as the central point of contact for members, guests, prospective customers, and tennis professionals.

Primary Participants

- Front Desk Staff
- Members
- Guests
- Tennis Professionals
- General Manager

Current Process

The front desk serves as the operational hub of the facility and is responsible for handling a wide variety of customer requests throughout the day.

Typical responsibilities include:

- Greeting members and guests.
- Checking customers into the facility.
- Sending players to their assigned courts.
- Booking and modifying court reservations.
- Registering customers for lessons, clinics, leagues, and special events.
- Processing membership applications.
- Accepting payments on customer accounts.
- Selling retail merchandise.
- Answering telephone inquiries.

- Responding to questions regarding memberships, billing, and programming.
- Communicating schedule changes to members and instructors.

To complete these tasks, employees reference paper court sheets, printed league schedules, hard copies of customer statements, and manual records.

Current Challenges

- Employees frequently don't have access to relevant information to answer customer questions (program/event sign-up, account balance information, etc).
- Routine transactions require unnecessary manual steps.
- Staff spend valuable time searching for customer information.
- Customer wait times increase during busy periods.
- Training new employees is more difficult due to a reliance on institutional knowledge of operations

Opportunities for Improvement

The ERP should provide front desk staff with a single customer workspace containing all information necessary to serve the customer.

From one screen, staff should be able to:

- Check customers into the facility.
- View customer information.
- Charge members/customers for court time and lessons
- Reserve courts.
- Register customers for programs.
- Process payments.
- View account balances.
- Review purchase history.
- Access signed waivers.
- Update customer information.
- View communication history.

The objective is to complete the majority of customer interactions without leaving a single application.

BP-005: Retail Sales (Point of Sale)

Purpose

To process retail sales efficiently while maintaining accurate inventory records, financial reporting, and customer purchase history.

Primary Participants

- Front Desk Staff
- Members
- Guests
- Manager/Accounting Staff

Current Process

Retail merchandise including racquets, apparel, grips, strings, accessories, clothing, and other products are sold through the front desk.

Employees manually write up paper and carbon copy invoices, recording product and price information, calculate discounts and taxes, and when necessary, accept payment, and issue receipts.

Inventory adjustments may occur separately from the sales transaction and accounting entries often require reconciliation with financial records.

Returns, exchanges, and gift certificates also require additional manual processing.

Current Challenges

- Product entry is labor intensive.
- Errors can and do occur regularly in both product identification and pricing
- Inventory updates do not occur in real time.
- Pricing changes require manual maintenance.
- Returns and exchanges involve additional administrative effort.

Opportunities for Improvement

The ERP should provide a modern point-of-sale solution that supports:

- Barcode scanning.
- Integrated account billing and/or payment processing.
- Automatic member pricing.
- Gift cards and store credit.
- Returns and exchanges.
- Real-time inventory updates.
- Automatic accounting entries.
- Customer purchase history.
- Sales reporting by product, category, employee, and time period.

Retail transactions should automatically update inventory quantities, customer purchase history, and financial records without requiring duplicate entry.

BP-006: Inventory Receiving and Management

Purpose

To maintain accurate inventory records while ensuring retail merchandise and operational supplies are available when needed.

Primary Participants

- Front Desk Staff
- General Manager
- Pro Shop Manager
- Vendors

Current Process

Inventory is ordered from multiple vendors and received by club staff.

Pro Shop Manager manually verify received merchandise against packing slips and invoices before updating inventory records.

Periodic physical inventory counts are performed to identify discrepancies.

Inventory adjustments are laborious time consuming.

Current Challenges

- Inventory records are updated manually.
- Receiving inventory (especially new products) requires complicated manual computer entry
- Inventory discrepancies may not be identified.
- Physical inventory counts are time consuming.
- Laborious inventory adjustment process.

Opportunities for Improvement

The ERP should provide integrated inventory management supporting:

- Barcode scanning.
- Purchase order receiving.
- Multiple inventory categories.
- Inventory valuation.
- Historical purchasing analysis.

Inventory quantities should update automatically following purchases, retail sales, adjustments, and transfers.

BP-007: Purchasing and Vendor Management

Purpose

To procure merchandise, supplies, equipment, and services necessary for club operations while maintaining financial control and positive vendor relationships.

Primary Participants

- General Manager
- Pro Shop Manager
- Vendors

Current Process

Inventory needs are identified through manual observation, physical inventory counts, employee requests (leaving a physical note), or scheduled purchasing activities (such as vendor program orders).

For retail orders, the Pro Shop manager place the order with the vendor (usually via online portal). Pro Shop Manager receives a notification of shipment and/or the vendor's invoice.

Upon receipt, shipments are verified against vendor invoices before being entered into inventory records and accounting systems.

Vendor invoices are reviewed separately before payment is processed.

Historical purchasing information, vendor pricing, and purchasing trends may not be readily available when making purchasing decisions.

Current Challenges

- Paper-dependent, manual process for receiving product from and sending payment to vendors

Opportunities for Improvement

The ERP should provide a centralized purchasing system that supports:

- Automatic inventory updates.
- Accounts payable integration.
- Aging of vendor bills to ensure timely payment.

The purchasing process should provide management with complete visibility into purchasing activity and vendor payment while reducing manual effort and improving inventory planning.

BP-010: Accounts Receivable

Purpose

To accurately bill customers for memberships, court reservations, lessons, clinics, leagues, retail purchases, and other services while ensuring timely collection of payments and maintaining accurate customer account balances.

Primary Participants

- Front Desk Staff
- General Manager/Accounting Staff
- Members and Guests

Current Process

Customer charges are generated from multiple operational activities, including recurring membership dues, court reservations, instructional programs, league participation, retail purchases, stringing services, locker rentals, and miscellaneous fees.

Charges originate from hand-written paper invoices and require manual entry into customer accounts in Sage software. Payments are accepted through a variety of channels, including cash, checks, credit/debit cards, and electronic payments, and are manually applied to outstanding balances.

Customer account statements are generated, printed, and mailed on a monthly basis. The General Manager and Accounting Staff monitor overdue balances, respond to billing inquiries, process account adjustments, and collect outstanding receivables.

The General Manager reviews accounts receivable reports to identify delinquent accounts and determine appropriate collection actions.

Current Challenges

- Manual invoice generation and payment application.
- Printed customer statements.
- Manual account adjustments.
- Time-consuming collections process.
- Limited real-time visibility into customer balances.

Opportunities for Improvement

The ERP should automatically generate invoices from all billable activities performed throughout the organization.

Customer payments should immediately update account balances, financial records, and customer histories regardless of payment method.

The system should provide:

- Automated recurring invoices.
- Electronic statements.
- Online payment capabilities.
- Automated payment reminders.
- Real-time customer balances.

- Accounts receivable aging reports.
- Collection management tools.
- Complete transaction histories.

Financial reporting should always reflect current receivable balances without requiring manual reconciliation.

BP-011: Accounts Payable

Purpose

To accurately manage vendor invoices, process payments, maintain vendor records, and ensure timely payment of organizational obligations.

Primary Participants

- General Manager/Accounting Staff
- Pro Shop Manager
- Vendors

Current Process

Vendor invoices are received through mail, email, or with delivered merchandise.

General Manager and Pro Shop Manager manually verify invoices against packing slips and receiving documentation before entering invoice information into the accounting system.

Invoices are scheduled for payment according to vendor terms and available cash flow.

Checks are prepared and issued and accounting records are updated to reflect payment activity.

Current Challenges

- Manual invoice entry.
- Manual verification of purchase documentation.
- Increased administrative effort during payment processing.

Opportunities for Improvement

The ERP should integrate purchasing, receiving, inventory, and accounts payable into one continuous workflow.

The system should support:

- Electronic invoice capture.
 - Automated invoice approval workflows.
 - Three-way matching of purchase orders, receiving records, and vendor invoices.
 - Scheduled payment processing.
 - Electronic payments.
 - Vendor aging reports.
-

BP-012: Payroll Processing

Purpose

To accurately compensate employees while maintaining compliance with payroll regulations, tracking labor costs, and supporting efficient workforce management.

Primary Participants

- General Manager
- Employees
- Tennis Professionals

Current Process

Hourly employee (Desk Staff, Tennis Professionals) work hours are calculated from paper time sheets. Commission-based pay (e.g., Pro Shop manager) is calculated manually as a percentage of sales.

The General Manager verifies employee time, calculates compensation, reviews deductions, prepares payroll, and distributes employee checks semi-monthly.

Payroll information is then recorded within the accounting system and labor costs are allocated to appropriate departments.

Employee records, payroll history, benefit information, and tax documentation may be maintained separately.

Current Challenges

- Manual collection of payroll information.

- Multiple sources for employee time and compensation.
- Manual payroll verification.

Opportunities for Improvement

The ERP should integrate employee records, scheduling, payroll, accounting, and departmental reporting.

The system should support:

- Salaried, commission-based, and hourly employees.
- Tennis professional compensation structures (Private, private groups, public groups)
- Payroll deductions.
- Vacation and sick leave tracking.
- Labor cost allocation.
- Payroll reporting.
- Electronic pay statements and direct deposit.
- Payroll history.
- Automatic financial posting.

Management should have real-time visibility into payroll expense by department, program, and reporting period.

BP-013: Financial Reporting

Purpose

To provide accurate, timely, and meaningful financial information supporting operational management, budgeting, strategic planning, and organizational governance.

Primary Participants

- General Manager
- Board of Directors
- Pro Shop Manager

Current Process

Financial reports are prepared by collecting information from accounting records, operational systems, spreadsheets, and manually compiled reports.

Departmental revenue and expenses are reviewed to evaluate organizational performance.

Operational reports such as court utilization, membership trends, lesson participation,.

Monthly financial reporting often requires significant reconciliation and manual preparation.

Current Challenges

- Financial information originates from multiple systems.
- Significant spreadsheet manipulation.
- Delayed report preparation.
- Limited operational dashboards.
- Difficulty combining operational and financial information.
- Time-consuming month-end closing.
- Limited forecasting capability.

Opportunities for Improvement

The ERP should provide real-time financial reporting integrated with operational data.

Management should have immediate access to:

- Profit and Loss Statements.
- Balance Sheets.
- Cash Flow Statements.
- Budget versus Actual reports.
- Revenue by department.
- Membership performance.
- Retail sales analysis.
- Court utilization statistics.
- Program profitability.
- Payroll expense.

- Accounts receivable.
- Accounts payable.
- Executive dashboards.
- Custom financial reports.

Reports should be generated directly from live business data without requiring manual consolidation.

BP-014: Customer Communications

Purpose

To communicate effectively with members, guests, prospective customers, employees, and program participants while maintaining consistent messaging and strengthening customer relationships.

Primary Participants

- Front Desk Staff
- General Manager
- Tennis Professionals
- Members and Guests

Current Process

Customer communications are generated through a variety of methods including email, telephone, printed statements, printed notices, text messages, social media, and verbal communication.

Distribution lists are often maintained separately from customer records and require manual updates when customer information changes.

Routine communications such as lesson reminders, court reservation confirmations, membership renewals, billing notices, league announcements, weather cancellations, and promotional campaigns are prepared independently and distributed through separate tools.

Staff have limited ability to view a complete history of communications sent to individual customers.

Current Challenges

- Multiple communication platforms.

- Separate contact lists.
- Manual maintenance of distribution groups.
- Duplicate communications.
- Inconsistent messaging.
- Limited communication history.
- Difficulty targeting specific customer segments.
- Significant staff time devoted to routine notifications.

Opportunities for Improvement

The ERP should provide a centralized communication platform integrated directly with customer records.

The system should support:

- Automated email notifications.
- SMS/text messaging.
- Reservation confirmations.
- Lesson reminders.
- Membership renewal notices.
- Billing notifications.
- Event announcements.
- Marketing campaigns.
- Customer segmentation.
- Communication templates.
- Communication history.
- Delivery tracking.
- Customer communication preferences.

Employees should be able to initiate communications directly from customer, program, membership, league, or reservation records without maintaining separate mailing lists.

Routine notifications should be generated automatically based upon business events, reducing administrative effort while improving consistency and customer service.

5. Scope

Purpose

This section defines the scope of the ERP implementation project and establishes the guiding principles that will govern solution design, software configuration, custom development, and future system maintenance.

The objective of this implementation is to deploy an integrated business management solution that supports the operational needs of the indoor tennis facility while minimizing implementation cost, project complexity, and long-term maintenance requirements.

Project Philosophy

The organization has selected Odoo because of its comprehensive suite of integrated business applications and its ability to support multiple operational functions from a single platform.

The preferred implementation approach is to maximize the use of standard Odoo functionality through configuration before considering custom software development.

Customizations should only be recommended when a documented business requirement cannot be reasonably satisfied through:

- Standard Odoo applications
- Native Odoo configuration options
- Approved Odoo Studio customizations
- Existing supported Odoo modules

The organization recognizes that excessive customization increases implementation cost, testing effort, future maintenance requirements, software upgrade complexity, and overall project risk.

Accordingly, every proposed customization should demonstrate clear business value that outweighs these additional costs.

Configuration-First Principle

The implementation team shall follow the principles below throughout the project:

Configure Before Customizing

Whenever practical, business processes should be adapted to standard Odoo functionality rather than modifying core application behavior.

Minimize Custom Code

Custom development should be limited to requirements that provide significant operational value and cannot be achieved through standard configuration.

Preserve Upgradeability

Solution design should prioritize compatibility with future Odoo upgrades.

Custom modules should avoid modifying core Odoo code whenever possible.

Favor Standard Business Practices

Where appropriate, existing business processes may be refined or standardized to align with proven ERP practices rather than reproducing inefficient legacy workflows.

Reduce Total Cost of Ownership

Implementation decisions should consider not only initial development cost but also long-term maintenance, support, training, documentation, and future enhancements.

In Scope

The ERP implementation shall include the following functional areas:

Customer Relationship Management (CRM)

- Customer records
- Family relationships
- Contact management
- Customer history
- Customer communications
- Document storage

Membership Management

- Membership types

- Billing (annual/monthly)
- Automatic renewals
- Member privileges
- Guest management
- Membership reporting

Court Scheduling

- Court reservations
- Recurring reservations
- Court availability
- Instructor scheduling
- Waitlists
- Court utilization reporting

Programs and Instruction

- Private lessons
- Group lessons
- Clinics
- Junior programs
- Adult programs
- Attendance tracking
- Instructor assignments

Point of Sale

- Retail sales
- Barcode scanning
- Member pricing
- Gift cards
- Returns

- Integrated payment processing

Inventory Management

- Retail inventory
- Teaching supplies
- Office supplies
- Maintenance inventory
- Purchasing
- Receiving
- Inventory valuation

Purchasing

- Vendor management
- Purchase requisitions
- Purchase orders
- Receiving
- Vendor invoices

Accounting

- General Ledger
- Accounts Receivable
- Accounts Payable
- Bank Reconciliation
- Budget reporting
- Financial statements

Payroll

- Employee records
- Payroll processing
- Leave management

- Payroll reporting

Reporting

- Executive dashboards
 - Financial reporting
 - Court utilization
 - Membership statistics
 - Instructor productivity
 - Inventory reporting
 - Operational analytics
-

Out of Scope

Unless specifically approved through formal change management, the following items are outside the scope of this implementation:

- Website redesign or redevelopment
- Public website content management
- Mobile application development beyond standard Odoo functionality
- Building automation systems
- Telephone system replacement
- Custom software unrelated to documented business requirements

Additional functionality requested after project approval shall be evaluated separately for cost, schedule impact, and implementation priority.

Customization Guidelines

All requested customizations should be evaluated using the following decision hierarchy:

Level 1 – Standard Odoo Functionality (Preferred)

Requirement is satisfied using standard Odoo applications with little or no configuration.

Level 2 – Configuration

Requirement is satisfied through configuration of existing Odoo functionality without software development.

Level 3 – Odoo Studio

Requirement is satisfied using Odoo Studio, custom fields, views, reports, or workflow configuration without modifying application logic.

Level 4 – Community or Certified Module

Requirement is satisfied using a well-supported third-party module that is actively maintained and compatible with the selected Odoo version.

Level 5 – Custom Development (Last Resort)

Custom software development should only be performed when all previous options have been evaluated and determined to be insufficient.

Each proposed customization should include:

- Business justification
- Functional requirement(s) addressed
- Estimated development effort
- Estimated implementation cost
- Future maintenance considerations
- Upgrade impact
- Testing requirements

Implementation Priorities

The implementation should prioritize delivery of core operational functionality before secondary enhancements.

Phase 1 – Core Operations

- CRM
- Membership Management
- Court Scheduling
- POS

- Inventory
- Accounts Receivable
- Customer Billing

Phase 2 – Financial Management

- Purchasing
- Accounts Payable
- General Ledger
- Payroll
- Financial Reporting

Phase 3 – Operational Enhancements

- Advanced reporting
- Workflow automation
- Executive dashboards
- Customer communications
- Document management
- Business intelligence
- Additional approved customizations

Project Success Criteria

The implementation shall be considered successful when:

- Staff can perform daily operations using a single integrated ERP platform.
- Duplicate data entry has been substantially eliminated.
- Financial transactions flow automatically between operational modules and accounting.
- Manual reconciliation has been significantly reduced.
- Standard Odoo functionality has been utilized wherever practical.

- Custom development has been limited to documented business requirements that provide measurable operational value.
- The system remains maintainable, upgradeable, and scalable for future organizational growth.

The completed ERP solution should provide a sustainable operational platform that supports the organization's needs for many years while minimizing future maintenance costs and reducing dependence on custom software.

6. User Roles

Purpose

This section defines the primary user roles that will interact with the ERP system and establishes the security principles governing access to business information.

The ERP system shall provide role-based security, ensuring that employees have access only to the information and functions necessary to perform their assigned responsibilities. User permissions should be configurable, allowing management to assign multiple roles to an employee when operational needs require cross-functional responsibilities.

The implementation should follow the **Principle of Least Privilege**, granting the minimum level of system access necessary for each role while protecting sensitive financial, payroll, and customer information.

Security Principles

The ERP implementation shall adhere to the following security principles:

- Role-based access control (RBAC) shall govern access to all system functions.
- Users shall only view, edit, approve, or delete information appropriate to their assigned responsibilities.
- Approval workflows shall be enforced for designated financial and administrative activities.
- Sensitive information, including payroll and financial records, shall be restricted to authorized personnel.
- User permissions shall be centrally administered by the General Manager or designated system administrator.

- Employees may be assigned multiple security roles when operational responsibilities require broader access.

User Role 1 – General Manager

Role Summary

The General Manager serves as the primary administrator of the ERP system and is responsible for overseeing all operational, financial, and administrative functions for FCRC.

This role requires unrestricted visibility across all operational departments and authority to approve financial transactions, modify system configuration (where appropriate), and access executive reporting.

The General Manager is expected to use the ERP as the primary management tool for monitoring club performance, managing staff, supporting customer service, and making strategic business decisions.

Primary Responsibilities

- Customer relationship management
- Membership administration
- Court scheduling oversight
- Program management
- Retail operations
- Inventory management
- Purchasing
- Accounts Receivable
- Accounts Payable
- Payroll oversight
- Financial reporting
- Executive dashboards
- Employee management
- Vendor management

- Document management
- System administration
- Workflow approvals

Required Permissions

The General Manager shall have permission to:

- Create, modify, and archive customer records.
- Create and modify membership types.
- Override reservation restrictions when necessary.
- Approve refunds, credits, and account adjustments.
- Approve purchase orders and vendor invoices.
- Access all accounting functions.
- View and approve payroll.
- Manage inventory.
- Create and modify reports.
- Configure workflow approvals.
- Manage employee permissions.
- View all operational dashboards.
- Export business data when authorized.

Approval Authority

The General Manager shall serve as the final approval authority for:

- Purchase approvals.
- Vendor payments.
- Payroll adjustments.
- Customer account credits.
- Inventory write-offs.
- Membership exceptions.

- Major pricing changes.
 - User permission changes.
-

User Role 2 – Pro Shop Manager / Accounting Assistant

Role Summary

The Pro Shop Manager / Accounting Assistant serves as the primary operational and financial support role within the organization.

This position manages daily retail operations while supporting accounting, purchasing, inventory management, customer billing, and administrative functions.

This role requires broad operational access but should have limited authority to approve high-value financial transactions or modify system configuration.

Primary Responsibilities

- Retail sales
- Inventory management
- Merchandise receiving
- Purchase order preparation
- Vendor communication
- Customer billing
- Accounts Receivable support
- Accounts Payable processing
- Bank deposit preparation
- Membership account maintenance
- Customer service support
- Financial reporting assistance

Required Permissions

The Pro Shop Manager / Accounting Assistant shall have permission to:

- Process retail sales.

- Receive inventory.
- Enter vendor invoices.
- Process customer payments.
- Generate customer invoices.
- View inventory reports.
- Adjust inventory with appropriate documentation.
- Process customer returns.
- Manage customer accounts.
- View accounting reports appropriate to assigned responsibilities.
- Generate operational reports.

Restricted Functions

This role shall not have authority to:

- Finalize payroll.
- Modify payroll records.
- Change accounting configuration.
- Delete financial transactions.
- Modify user permissions.
- Override security settings.
- Approve high-value vendor payments beyond established approval thresholds.

User Role 3 – Front Desk / Point of Sale

Role Summary

The Front Desk / Point of Sale role supports daily customer-facing operations and serves as the primary point of contact for members and guests.

Employees assigned this role require fast, intuitive access to customer information while maintaining limited access to financial and administrative functions.

The system interface should prioritize speed, simplicity, and ease of use to support efficient customer service during busy operating hours.

Primary Responsibilities

- Customer check-in
- Court reservations
- Lesson registration
- League registration
- Membership inquiries
- Retail sales
- Payment processing
- Gift card sales
- Customer account updates
- Telephone support
- Daily customer communications

Required Permissions

The Front Desk / Point of Sale role shall have permission to:

- Search customer records.
- Create new customer accounts.
- Update customer contact information.
- Reserve courts.
- Register customers for programs.
- Process retail sales.
- Accept customer payments.
- View customer account balances.
- Apply approved discounts.
- Issue receipts.

- Print or email invoices.
- Access customer waivers and required documentation.
- Record customer notes.

Restricted Functions

This role shall not have authority to:

- Access payroll information.
 - Modify accounting records.
 - Approve purchase orders.
 - Process vendor payments.
 - View confidential financial reports.
 - Delete customer transactions.
 - Change pricing policies.
 - Modify inventory valuation.
 - Change security permissions.
 - Access executive dashboards beyond operational metrics.
-

Temporary Role Assignments

The ERP shall support temporary assignment of additional security roles when operational needs require employees to perform responsibilities outside their normal job functions.

Examples include:

- General Manager covering front desk operations.
- Pro Shop Manager assisting with accounting.
- Front Desk staff assisting with inventory counts.

Temporary role assignments should maintain complete audit histories and expire automatically when no longer required.

Role-Based Dashboards

Each user role should be presented with a dashboard tailored to its operational responsibilities.

General Manager Dashboard

- Daily revenue
- Membership statistics
- Court utilization
- Accounts Receivable aging
- Accounts Payable
- Cash position
- Payroll summary
- Inventory alerts
- Executive KPIs
- Operational notifications

Pro Shop Manager / Accounting Assistant Dashboard

- Daily sales
- Inventory alerts
- Purchase orders awaiting receipt
- Vendor invoices pending processing
- Customer balances
- Accounts Receivable summary
- Low inventory notifications

Front Desk / Point of Sale Dashboard

- Court schedule
- Customer check-ins
- Upcoming reservations
- Daily POS transactions

- Lesson registrations
 - Customer alerts
 - Membership expirations
 - Outstanding customer tasks
-

Future Expansion

The ERP security model should be designed to accommodate future user roles without significant redesign.

Potential future roles may include:

- Tennis Professionals
- Director of Racquet Sports
- Board Members (read-only reporting)
- External Accountant
- Seasonal Employees

The implementation should allow additional roles to be configured through standard Odoo security groups whenever possible, minimizing the need for custom development.

7. Functional Requirements

CRM & Memberships

BR-CRM-001

When a new customer account is created, the system shall verify that duplicate customer records do not already exist.

BR-CRM-002

Changes to customer contact information shall immediately update all modules utilizing customer data.

BR-CRM-003

All customer interactions—including reservations, purchases, invoices, payments, lessons, leagues, and communications—shall become part of the customer's permanent history.

BR-CRM-004

Customer records shall never be deleted. Inactive customers shall be archived while preserving historical transactions.

BR-CRM-005

Customer documents (waivers, contracts, correspondence, etc.) shall automatically become part of the customer's electronic record.

BR-CRM-006

Recurring memberships shall generate invoices automatically according to the established billing schedule.

Business Requirements: Maintain a single customer record including memberships, family links, waivers, balances, reservations, purchases, communications.

User Story: As a front desk employee, I want to find a customer in seconds so I can serve them quickly.

Acceptance Criteria: Customer search <2 seconds; duplicate detection; complete history.

Court Scheduling

BR-COURT-001

The system shall prevent double-booking of courts.

BR-COURT-002

Reservation rules shall be enforced automatically based upon membership type, booking windows, and club policies.

BR-COURT-003

Canceled reservations shall immediately return courts to available inventory.

BR-COURT-004

When a court becomes available, waitlisted customers may be automatically notified according to configurable club rules.

BR-COURT-005

Court closures due to maintenance, weather, or special events shall automatically remove affected availability.

BR-COURT-006

Reservations shall automatically appear on instructor schedules, customer schedules, and management reports.

Business Requirements: Electronic reservations, recurring bookings, online/member/front desk booking, waiting lists, maintenance blocks.

User Story: As a member, I want to reserve a court online based on my privileges.

Acceptance Criteria: No double bookings; booking rules enforced.

Point of Sale

BR-POS-001

Barcode scanning shall automatically identify products and pricing.

BR-POS-002

Member pricing and discounts shall be applied automatically when applicable.

BR-POS-003

Completed sales shall immediately update inventory quantities.

BR-POS-004

Completed sales shall automatically create accounting entries.

BR-POS-005

Returns and exchanges shall automatically reverse inventory and financial transactions while preserving complete audit history.

BR-POS-006

Customer purchase history shall update immediately following each completed transaction.

Business Requirements: Barcode scanning, real-time inventory updates, returns, gift cards.

User Story: As cashier I scan items instead of typing.

Acceptance Criteria: Inventory updates immediately

Inventory

BR-INV-001

Receiving inventory shall automatically update available stock.

BR-INV-002

Inventory adjustments shall require documentation and maintain a complete audit trail.

BR-INV-003

Inventory valuation shall update continuously based upon purchases, sales, and adjustments.

BR-INV-004

Physical inventory counts shall reconcile inventory discrepancies while preserving historical records.

BR-INV-005

Receipt of inventory shall update inventory records before vendor invoices are approved for payment.

BR-INV-006

Vendor invoices shall be matched against purchase orders and receiving records before payment.

Accounting & Payroll

BR-ACC-001

All billable customer activities shall automatically generate customer charges.

BR-ACC-002

Customer payments shall immediately update customer balances and accounting records.

BR-ACC-003

Electronic statements shall be generated according to the club's billing schedule.

BR-ACC-004

Past-due accounts shall receive automated reminders according to configurable collection policies.

BR-ACC-005

Customer credits, write-offs, and adjustments shall require appropriate authorization.

BR-ACC-006

Vendor invoices shall follow configurable approval workflows before payment.

BR-ACC-007

Scheduled payments shall be generated according to vendor payment terms.

BR-ACC-008

Vendor payments shall automatically update accounting records.

BR-ACC-009

Duplicate vendor invoices shall be detected before payment processing.

BR-ACC-010

Employee compensation shall be calculated automatically based upon approved payroll rules.

BR-ACC-011

Employee leave balances shall update automatically following payroll processing.

BR-ACC-012

Payroll expenses shall automatically post to the General Ledger.

BR-ACC-013

Payroll adjustments shall require managerial authorization and maintain complete audit history.

Business Requirements: AR/AP, GL, bank recs, payroll, commissions.

User Story: As accountant I close month-end without reentry.

Acceptance Criteria: Financial reports reconcile.

8. Non-Functional Requirements

Purpose

This section defines the non-functional requirements for the ERP implementation. Unlike the functional requirements, which describe what the system must do, these requirements define the expected performance, reliability, usability, security, maintainability, and operational characteristics of the solution.

All proposed solutions shall satisfy these requirements unless otherwise approved by the organization.

NFR-001: Availability

Objective

The ERP shall be available whenever the club is conducting normal business.

Requirements

- Target system availability shall be **99.9% during business hours**, excluding scheduled maintenance.
 - Planned maintenance should occur outside normal operating hours whenever practical.
 - Users shall receive advance notification of scheduled outages.
 - Unexpected outages shall be communicated promptly to designated administrators.
-

NFR-002: Scalability

Objective

The solution shall support future organizational growth without significant redesign.

Requirements

The system shall support future expansion including:

- Additional tennis courts
- New membership types

- Additional retail inventory
- Increased customer volume
- Additional employees
- Expanded instructional programs
- Additional user roles
- Increased reporting requirements

The implementation should minimize architectural changes as the organization grows.

NFR-003: Reliability and Data Integrity

Objective

Business information shall remain accurate, complete, and consistent.

Requirements

- Transactions shall either complete successfully or roll back completely.
 - Duplicate customer records shall be minimized through validation.
 - Financial transactions shall remain balanced.
 - Inventory quantities shall remain synchronized with purchasing and sales.
 - Reservation conflicts shall be prevented automatically.
 - Audit trails shall preserve transaction history.
-

NFR-004: Security

Objective

The ERP shall protect sensitive business and customer information through appropriate security controls.

Requirements

- Role-based security shall govern system access.
- Employees shall access only information necessary for their responsibilities.

- Password policies shall follow current industry best practices.
- Sensitive financial and payroll information shall be restricted.
- User sessions shall automatically expire after a configurable period of inactivity.
- Failed login attempts shall be logged.
- Administrative activities shall be fully auditable.

NFR-005: Auditability

Objective

The organization shall maintain complete accountability for significant business transactions.

Requirements

The system shall record:

- User performing the action
- Date and time
- Original values
- Modified values
- Approval history
- Transaction notes where applicable

Historical information shall remain available for reporting and audit purposes.

NFR-006: Usability

Objective

The ERP shall be intuitive and require minimal employee training.

Requirements

- Common tasks should require the fewest practical number of user interactions.
- Navigation should remain consistent throughout the system.

- Users should have personalized dashboards appropriate to their role.
 - Frequently used functions should be easily accessible.
 - Error messages should clearly explain corrective actions.
 - The user interface should support efficient operation during busy customer service periods.
-

NFR-007: Maintainability

Objective

The ERP shall be maintainable with minimal ongoing custom development.

Requirements

- Standard Odoo functionality shall be used whenever practical.
 - Configuration shall be preferred over customization.
 - Custom modules shall be documented.
 - Future software upgrades should require minimal redevelopment.
 - Business rules shall be configurable whenever possible.
 - Administrative settings should be manageable without programming knowledge.
-

NFR-008: Reporting

Objective

Management shall have timely access to accurate operational and financial information.

Requirements

The system shall provide:

- Real-time dashboards
- Export to Excel and PDF
- Configurable filters
- Saved report templates

- Scheduled report distribution
 - Drill-down capability from summary reports to supporting transactions
-

NFR-009: Backup and Disaster Recovery

Objective

Business data shall be protected against accidental loss or system failure.

Requirements

- Automated backups shall occur daily at a minimum.
 - Backup integrity shall be verified regularly.
 - Recovery procedures shall be documented and tested.
 - Historical backups shall be retained according to the organization's data retention policy.
 - Critical business data shall be recoverable following hardware or software failure.
-

NFR-010: Integration

Objective

All operational modules shall function as a single integrated business platform.

Requirements

Information entered into one module shall automatically update related modules without duplicate data entry.

Examples include:

- POS transactions updating accounting and inventory.
 - Membership renewals updating customer status.
 - Payroll updating the General Ledger.
 - Purchase receipts updating inventory.
 - Customer payments updating Accounts Receivable.
-

NFR-011: Documentation

Objective

The implementation shall include sufficient documentation to support ongoing operations.

Requirements

The implementation partner shall provide:

- System configuration documentation.
 - Customization documentation.
 - Workflow documentation.
 - Security role documentation.
 - Data migration documentation.
 - Administrator reference guides.
 - End-user training materials.
 - Technical documentation for custom modules.
-

NFR-012: Testing and Quality Assurance

Objective

The completed solution shall be thoroughly tested prior to production deployment.

Requirements

Testing shall include:

- Unit Testing
- Integration Testing
- Data Migration Validation
- User Acceptance Testing (UAT)
- Performance Testing
- Security Testing
- Regression Testing (for customizations)

No production deployment shall occur until all critical defects have been resolved or accepted by the organization.

NFR-013: Support and Upgradeability

Objective

The ERP shall remain supportable throughout its operational life.

Requirements

- The implementation should preserve compatibility with future supported Odoo releases.
 - Customizations shall avoid modifying core Odoo code whenever practical.
 - The implementation partner shall identify any third-party modules and describe their maintenance requirements.
 - A documented process shall exist for applying updates, testing changes, and deploying new Odoo versions with minimal disruption to operations.
-

Acceptance Criteria

The implementation shall satisfy all non-functional requirements before final project acceptance.

9. Data Migration

Purpose

The successful implementation of the ERP system depends upon the accurate migration of business data from existing systems into Odoo. The purpose of this section is to define the organization's expectations regarding data conversion, validation, reconciliation, and historical data retention.

The primary objective of the data migration process is to provide a complete, accurate, and reliable foundation for daily operations while minimizing implementation risk and maintaining financial continuity.

The implementation partner shall develop a detailed Data Migration Plan based upon these business requirements and identify any assumptions, risks, or limitations prior to beginning the migration process.

Migration Philosophy

The organization recognizes that not all historical data provides equal business value.

Rather than migrating every historical transaction from legacy systems, the implementation should prioritize:

- Accurate master data.
- Complete active operational records.
- Financial continuity.
- Historical reporting capability.
- Minimized implementation complexity.
- Reduced project risk.

Where practical, historical detail that is not required for ongoing operations may remain accessible within the legacy Sage 50 system or through archived reports.

Source Systems

At the time of implementation, business information is maintained in multiple locations, including but not limited to:

Source System	Primary Data
Sage 50	General Ledger, Accounts Receivable, Accounts Payable, Vendor Records, Customer Records, Inventory, Payroll (if applicable), Financial History
Spreadsheets	Membership information, leagues, reports, miscellaneous operational data
Paper Records	Membership applications, contracts, historical documentation

The implementation partner shall review all source systems and recommend the most effective migration approach for each data source.

Data to be Migrated

Customer Records

The following customer information shall be migrated whenever available:

- Customer name
- Household relationships
- Mailing address
- Telephone numbers
- Email addresses
- Membership status
- Membership history (current status at minimum)
- Customer account balances

Duplicate customer records shall be identified and resolved prior to migration.

Vendor Records

Vendor information shall include:

- Vendor names
 - Addresses
 - Contact information
 - Payment terms
 - Vendor categories
 - Tax information
 - Outstanding balances
 - Active vendor status
-

Inventory

Inventory migration shall include:

- Product descriptions

- SKU numbers
- Product categories
- Vendor associations
- Unit costs
- Retail prices
- Quantity on hand
- Inventory valuation
- Tax categories

Inactive or obsolete inventory should be reviewed prior to migration.

Membership Information

The migration shall include:

- Active memberships
- Membership types
- Renewal dates
- Billing schedules
- Member privileges
- Household memberships
- Membership status

Historical memberships may be archived unless otherwise required.

Accounts Receivable

The migration shall include:

- Outstanding customer invoices
- Customer credits
- Customer deposits

- Customer account balances
- Aging information

Historical paid invoices may remain in Sage 50 for reference.

Accounts Payable

The migration shall include:

- Outstanding vendor invoices
- Vendor credits
- Scheduled payments
- Vendor balances

Historical paid invoices may remain within the legacy accounting system.

General Ledger

The implementation shall establish opening balances that reconcile to the organization's Sage 50 financial records as of the agreed-upon conversion date.

The migration shall include:

- Chart of Accounts
- Beginning balances
- Fiscal year configuration
- Cost centers or departments (if applicable)
- Budget information (if applicable)

The organization does not expect every historical accounting transaction to be migrated unless specifically identified during project planning.

Employee Information

Employee records should include:

- Employee demographics

- Employment status
 - Compensation information
 - Tax withholding information
 - Payroll history required for current-year reporting
 - Security roles
-

Data Cleansing

Prior to migration, the organization expects a comprehensive review of existing data.

The implementation partner shall identify:

- Duplicate customer records.
- Inactive customer accounts.
- Obsolete inventory items.
- Duplicate vendors.
- Invalid addresses.
- Missing contact information.
- Invalid product records.
- Inconsistent naming conventions.

The organization shall review and approve all proposed data cleansing activities before migration begins.

Data Validation

Following migration, the implementation partner shall validate migrated information to ensure completeness and accuracy.

Validation shall include, at a minimum:

- Customer record counts.
- Vendor record counts.
- Inventory quantities.

- Customer balances.
- Vendor balances.
- General Ledger balances.
- Membership counts.
- Employee records.

Any discrepancies shall be documented and resolved prior to production deployment.

Financial Reconciliation

Financial integrity is a critical success factor for this implementation.

The implementation partner shall demonstrate that:

- Beginning General Ledger balances reconcile to Sage 50.
- Accounts Receivable balances reconcile.
- Accounts Payable balances reconcile.
- Inventory valuation reconciles.
- Bank balances reconcile.
- Outstanding customer balances reconcile.
- Outstanding vendor balances reconcile.

The General Manager and designated accounting personnel shall review and approve financial reconciliation before production use.

Cutover Strategy

The implementation partner shall develop a detailed cutover plan that minimizes disruption to club operations.

The plan shall include:

- Final data extraction schedule.
- System freeze period.
- Final migration activities.

- Validation procedures.
- User acceptance testing.
- Go-live checklist.
- Contingency procedures.
- Rollback strategy (if required).
- Post-implementation support plan.

The preferred implementation approach is to perform the final migration during a period of lower business activity whenever practical.

Data Migration Acceptance Criteria

The data migration shall be considered complete when all of the following conditions have been satisfied:

- All approved master data has been successfully migrated.
- All required operational data has been successfully migrated.
- Financial opening balances reconcile to Sage 50.
- Active customer accounts are accurate.
- Inventory quantities and valuation are verified.
- Outstanding receivables and payables reconcile.
- Future court reservations and program registrations are complete.
- Security roles have been assigned correctly.
- Sample transaction testing confirms accurate operation of the new ERP.
- The General Manager has approved the migration results.

No production go-live shall occur until all critical data validation issues have been resolved or formally accepted by the organization.

10. Overall Acceptance Criteria

System passes UAT, financial reconciliation, scheduling validation, POS testing, and 30-day stabilization.

Appendix

Future versions should include workflow diagrams, entity relationship diagrams, screen mockups, and detailed field definitions.

i Hand written invoices

The image shows three hand-written invoices from the Fox Cities Racquet Club. Each invoice has a header with the club's name, address (2018 N. Victory Lane, Appleton, WI 54912), and phone number (920-837-1234). The invoices are numbered 257652, 257653, and 257656. They contain handwritten details about the court rental, including dates, times, and court numbers. The third invoice also includes a handwritten note 'Check #251'.

ii Paper court sheets

The image shows two paper court sheets from the Fox Cities Racquet Club. The left sheet is for a court rental on April 6th, Sunday, and lists the court as 'ORANGE RED'. The right sheet is for a court rental on April 6th, Sunday, and lists the court as 'HIGH SCHOOL JV'. Both sheets have columns for 'Court 1', 'Court 2', 'Court 3', and 'Court 4'. The left sheet also has a 'DOUBLES' section with 'ORANGE RED' and 'GREEN MS 1' listed. The right sheet has a 'HS VARSITY 1' and 'HS VARSITY 2' listed.
