

Fox Cities Racquet Club - Odoo

BRD and Scope of Work

Document date: 2026-07-17

Prepared for: Fox Cities Racquet Club

Prepared by: DearERP

System scope: Odoo club operations, custom court booking, memberships, retail inventory, sales, purchase, accounting, POS, barcode, and CRM

1. Executive Summary

Fox Cities Racquet Club requires an Odoo-based operating system to manage indoor court reservations, player/member handling, club memberships, court billing, retail inventory, point-of-sale operations, purchase replenishment, sales, accounting, and customer pipeline activities.

The core custom module prepared for this business is `FCRC Court Seat Booking`. It provides a booking dashboard, court configuration, seat/time availability, membership-aware billing, non-member entry fee logic, ball machine rental billing, booking lifecycle tracking, reminders, no-show handling, membership invoicing, and booking analysis.

This BRD extends that custom module into a wider implementation scope covering:

- Accounting
- Sales
- Purchase
- Point of Sale
- Barcode

- Inventory
- CRM
- Products and retail stock
- Membership and court booking operations

2. Business Objectives

The implementation should help the club:

- Manage court availability by date, time, court, and seat capacity.
- Support both person/hour and court/hour billing policies.
- Track members and non-members clearly from the contact record.
- Invoice court bookings, memberships, non-member fees, and ball machine rentals.
- Prevent invalid booking operations such as past booking, early court start, double booking, and over-capacity booking.
- Track operational exceptions such as potential no-shows, late starts, and courts not ended on time.
- Maintain demo-ready stock for racquets, strings, balls, hats, and accessories.
- Sell club retail products through Sales and POS.
- Purchase and replenish retail inventory.
- Use barcode scanning for product lookup and inventory/POS workflows.
- Track prospects for memberships, lessons, events, and corporate/group opportunities in CRM.
- Provide accounting visibility for invoices, payments, revenue, and receivables.

3. Current Custom Module Overview

Custom module: `fcrc_court_seat_booking`

Functional name: FCRC Court Seat Booking

Category: Services

Core dependencies: Base, Accounting, Product, Web, Mail

3.1 Main Custom Objects

Object	Purpose
Court	Stores court configuration, seat capacity, billing policy, hourly rate, and availability setup.
Court Booking	Stores booking header, court, scheduled time, actual play time, booking state, invoice, pricing, and audit information.
Booking Line	Stores players assigned to the booking and their membership status at booking time.
Court Season Rate	Stores date-based rate setup, non-member entry fee, and ball machine hourly rate.
Membership Year	Stores annual membership period and non-member booking limits.
Membership Plan	Stores named membership plans, pricing, duration, proration policy, and linked invoice product.
Membership Line	Stores purchased membership coverage for a contact.
Booking Report	SQL-backed reporting model for pivot, graph, and list analysis.

Object	Purpose
Booking Wizards	Support quick booking, extension, cancellation, and membership invoicing.

4. Court Booking Requirements

4.1 Court Configuration

Each court must support:

- Court name and code.
- Court type, such as indoor or outdoor.
- Player seat capacity.
- Billing basis:
 - Person / Hour
 - Court / Hour
- Hourly rate.
- Active/inactive status.
- Internal notes.

Business rule:

- If billing basis is `Person / Hour`, booking availability is based on the number of available player seats.
- If billing basis is `Court / Hour`, any booking blocks the whole court, even if only two players are entered.

4.2 Dashboard Booking Experience

The dashboard should provide:

- Date selection using Today, Tomorrow, and custom date picker.
- Preview time and duration selection.
- Court cards with seat availability.
- Fixed-size seat cards for consistent layout.
- A View Times action to show available and booked hours for the selected court/day.
- Time slot cards showing available, full, partial, or past status.
- X close control for the time slot panel.
- Bookable future slots only.
- Court-level status such as available, partial, full, and in use.

4.3 Booking Creation

Users should be able to:

- Select a court.
- Select an available time slot.
- Select one or more players.
- Add ball machine rental if required.
- Add booking notes.

System validations:

- Past date/time bookings are not allowed.
- End time must be after start time.
- Selected players must not exceed court capacity.
- Court/hour bookings block the entire court.
- Person/hour bookings only consume selected player seats.

- Existing overlapping bookings must be considered before confirming availability.

4.4 Booking Lifecycle

Booking states:

- Draft
- Reserved
- In Use
- Completed
- Invoiced
- No Show
- Cancelled

Expected flow:

1. Booking is created in Draft or Reserved.
2. Reserved booking can be started only within allowed time window.
3. Start Play records actual start time and moves booking to In Use.
4. End Play records actual stop time and moves booking to Completed.
5. Create Invoice creates a draft customer invoice and moves booking to Invoiced.
6. Cancelled and No Show states remain available for exception handling.

4.5 Start and End Play Rules

Start Play:

- Only reserved bookings can be started.
- Booking cannot start after scheduled end time.
- Players may start only within 15 minutes before scheduled start time.

- If the player arrives earlier than the 15-minute buffer, the system must show a validation error.
- Start Play records actual start time for audit purposes.

End Play:

- Only in-use bookings can be ended.
- Actual stop time must be after actual start time.
- End Play records actual stop time.
- Actual play time is for internal audit only and must not change billing.

Billing rule:

- Billing is based on scheduled booking hours, not consumed or actual play hours.

4.6 No-Show and Operational Attention

The system should identify:

- Reserved bookings where start time has passed.
- Reserved bookings where end time has passed.
- In-use bookings where scheduled end time has passed but play was not ended.
- Bookings starting within the next 30 minutes.

Operational indicators:

- Potential No Show
- Past Start
- Starts Soon
- End Overdue

Automated reminders:

- Activity reminder for bookings starting within the next 30 minutes.
- Activity reminder for in-use bookings not ended after scheduled end time.

4.7 Cancellation

Cancellation should:

- Require a cancellation reason.
- Store cancelled by user.
- Store cancellation date/time.
- Not allow cancellation where a linked invoice exists unless the draft invoice is deleted first.

4.8 Booking Invoicing

Invoice should include:

- Court/person or court/hour charge based on court billing policy.
- Non-member entry fee where applicable.
- Ball machine rental line where selected.

Invoice behavior:

- Draft invoice is linked to booking.
- Invoice smart button opens the linked invoice.
- If draft invoice is deleted, booking invoice link should clear and operational buttons should become available again.
- Cancelled and no-show bookings should not be invoiceable.

5. Membership Requirements

5.1 Membership Plan

The club should be able to create named membership plans with:

- Plan name.
- Description.
- Duration days.
- Price.
- Proration option.
- Active/inactive status.

Business decision:

- No separate family/adult membership type is required for the demo.
- Membership identification is handled through the plan name.
- Family eligibility is handled operationally outside ERP for this demo.

5.2 Membership Product Handling

Membership plans require invoice products only for accounting invoice lines.

System behavior:

- The system should create and maintain the linked service product automatically.
- Product should be configured as service.
- Product should be saleable.
- Product should not be purchaseable.
- Customer taxes should be empty unless the business later decides otherwise.
- Product form should not be part of the membership creation workflow.

5.3 Membership Year

The system should support:

- Membership year name.
- Start and end dates.
- Non-member booking limit per membership year.

Default period:

- September 1 to August 31.

5.4 Membership Sale / Invoice

Users should be able to invoice membership directly from:

- Contact form.
- Members list.
- Non-members list.

The wizard should:

- Select contact.
- Select membership plan.
- Select membership year.
- Compute start date, end date, duration, annual price, and prorated price.
- Create a draft customer invoice.
- Create the membership line linked to the invoice.

5.5 Membership Status

A contact can have only one active membership covering the same period.

Membership statuses:

- Active Member

- Expired Member
- Non-member

Menus:

- Members: contacts with active membership.
- Non-members: contacts without active membership.

Booking usage:

- Member/non-member status is used during booking pricing.
- Non-members may be charged entry fees.
- Non-member booking limits may apply within a membership year.

6. Retail Inventory Requirements

The club sells and stocks retail items such as:

- Racquets
- Strings
- Tennis balls
- Hats
- Overgrips
- Dampeners
- Wristbands
- Socks
- Other pro-shop accessories

6.1 Product Master

Products should support:

- Product name.
- Internal reference/SKU.
- Product category.
- Sales price.
- Cost.
- Sale enabled.
- Purchase enabled.
- Storable goods configuration.
- Barcode where applicable.
- Vendor information where applicable.

Recommended categories:

- Racquets
- Strings
- Balls
- Apparel
- Accessories
- Services
- Memberships

6.2 Initial Demo Stock

Demo stock should include:

Product Type	Example
Racquets	Recreational, performance, junior racquets
Strings	Synthetic gut, polyester string sets

Product Type	Example
Balls	Single cans and case packs
Accessories	Overgrips, dampeners, wristbands
Apparel	Hats and socks

Inventory should be available in the main stock location for sales/POS demonstration.

6.3 Inventory Operations

Inventory scope:

- On-hand quantity tracking.
- Receipts from vendors.
- Internal adjustments.
- Reordering rules for common retail products.
- Inventory valuation based on cost configuration.
- Product category reporting.
- Stock availability review for POS and sales.

7. Sales Module Scope

Sales should support:

- Quotations and sales orders for club retail products.
- Customer invoices from confirmed sales orders.
- Product pricing based on sales price.
- Customer-level order history.
- Optional quote flow for events, group court rentals, or corporate programs.

Sales usage examples:

- Retail customer buys racquet and accessories through sales order.
- Corporate customer requests group court booking quote.
- Club sells membership package through customer invoice.

Integration:

- Products shared with Inventory and POS.
- Invoices posted to Accounting.
- Customer data shared with Contacts and CRM.

8. Point of Sale Scope

POS should support front-desk/pro-shop transactions.

POS requirements:

- Sell racquets, strings, balls, hats, accessories, and other club retail items.
- Search products by name, category, or barcode.
- Accept customer selection where needed.
- Process payment at counter.
- Reduce inventory on sale.
- Create accounting entries based on POS closing/session.

Recommended POS categories:

- Racquets
- Balls
- Strings
- Accessories

- Apparel
- Services

POS considerations:

- Membership invoicing can remain in contact workflow rather than POS for the demo.
- Court booking invoices can remain in the booking workflow rather than POS for the demo.
- Later enhancement may allow POS payment collection for court invoices.

9. Purchase Module Scope

Purchase should support replenishment of pro-shop inventory.

Purchase requirements:

- Vendor master setup.
- Vendor pricelists.
- Purchase RFQ and purchase order flow.
- Product receipt into inventory.
- Vendor bills posted to Accounting.
- Reordering rules for fast-moving items such as tennis balls, grips, and strings.

Purchase flow:

1. Create RFQ to vendor.
2. Confirm purchase order.
3. Receive products into stock.
4. Create vendor bill.
5. Post bill and pay through Accounting.

10. Accounting Module Scope

Accounting should support:

- Customer invoices for court bookings.
- Customer invoices for memberships.
- Customer invoices for sales orders.
- POS accounting entries.
- Vendor bills from purchases.
- Customer payments.
- Vendor payments.
- Accounts receivable and payable.
- Revenue reporting by income category.
- Tax configuration where required.
- Bank reconciliation.

Revenue streams:

- Court rental revenue.
- Non-member entry fees.
- Ball machine rentals.
- Membership revenue.
- Retail sales revenue.
- Event/group booking revenue if later implemented.

Key accounting controls:

- Invoice must link back to booking where generated from booking.
- Membership invoices must create membership coverage.

- Draft invoice deletion should release related booking state where applicable.
- Posted invoice cancellation should follow accounting controls.

11. Barcode Scope

Barcode should support:

- Product barcode setup.
- Barcode scanning in POS.
- Barcode scanning during inventory receipts.
- Barcode scanning during inventory adjustments.
- Barcode scanning during internal operations where applicable.

Barcode data requirements:

- Barcode field on each stockable product.
- Printed product labels where required.
- Consistent barcode policy for club-created/private-label products.

Recommended barcode usage:

- Tennis balls and packaged accessories.
- Hats and apparel.
- Racquets and string packs.
- POS checkout scanning.
- Receiving purchase shipments.

12. CRM Scope

CRM should track sales and membership opportunities.

CRM use cases:

- New membership inquiries.
- Trial visit follow-up.
- Corporate/group booking opportunities.
- Event leads.
- League/program interest.
- Lessons or coaching inquiry handoff.

CRM stages:

- New Inquiry
- Contacted
- Trial / Visit Scheduled
- Proposal / Quote
- Won
- Lost

CRM integration:

- Convert won leads into customers/contacts.
- Create quotation where required.
- Trigger membership invoice workflow from contact when appropriate.
- Track source/campaign for marketing analysis.

13. Reporting Requirements

13.1 Booking Analysis

Booking report should support pivot, graph, and list analysis by:

- Booking date.
- Court.
- Booking state.
- Billing basis.
- Payment state.
- Ball machine rental.

Measures:

- Booking count.
- Player count.
- Member player count.
- Non-member player count.
- Scheduled hours.
- Booked seat hours.
- Court revenue.
- Entry fee revenue.
- Ball machine revenue.
- Estimated total revenue.
- Member revenue.
- Non-member revenue.

13.2 Operational Dashboard

Dashboard should show:

- Court availability.
- Time slots.
- Current and future booking context.

- Starts soon queue.
- End overdue queue.
- Potential no-show queue.
- Daily booking and revenue summary.

13.3 Accounting and Sales Reporting

Reports should include:

- Revenue by stream.
- Open invoices.
- Paid/unpaid court bookings.
- Membership revenue.
- POS sales.
- Product sales by category.
- Inventory valuation.
- Purchase spend by vendor.

14. User Roles

Role	Responsibilities
Front Desk User	Book courts, start/end play, mark no-show, invoice court bookings, sell retail items.
Club Manager	Configure courts, rates, membership plans, review reports, monitor operations.
Accountant	Manage invoices, payments, vendor bills, reconciliation, financial reporting.

Role	Responsibilities
Inventory User	Receive stock, adjust inventory, review product availability.
Purchase User	Create RFQs, confirm purchase orders, manage vendor replenishment.
POS User	Process retail sales and counter payments.
CRM User	Track leads, membership inquiries, events, and follow-ups.
System Admin	Manage configuration, access rights, and module settings.

15. Detailed Scope of Work

Phase 1 - Discovery and Confirmation

Activities:

- Confirm final court list and capacities.
- Confirm billing basis per court.
- Confirm operating hours.
- Confirm membership plans and prices.
- Confirm membership year dates.
- Confirm non-member entry fee policy.
- Confirm ball machine rental rate.
- Confirm retail product categories.
- Confirm POS payment methods.
- Confirm accounting chart/account mappings.

Deliverables:

- Approved configuration workbook.
- Confirmed business process maps.
- Finalized demo data list.

Phase 2 - Custom Court Booking Configuration

Activities:

- Configure courts.
- Configure court seat capacity.
- Configure person/hour or court/hour billing basis.
- Configure hourly rates.
- Configure season rates.
- Configure non-member entry fee.
- Configure ball machine hourly rate.
- Validate dashboard availability logic.
- Validate booking conflict logic.
- Validate past booking prevention.
- Validate start and end play rules.

Deliverables:

- Court configuration.
- Dashboard-ready booking flow.
- Validated booking state transitions.

Phase 3 - Membership Configuration

Activities:

- Configure membership years.
- Configure membership plans.
- Validate automatic product creation for membership invoicing.
- Validate membership invoice wizard.
- Validate one-active-membership rule.
- Validate members and non-members menus.
- Validate member/non-member behavior inside booking.

Deliverables:

- Membership plan master.
- Membership invoicing process.
- Contact membership status flow.

Phase 4 - Booking Billing and Accounting Integration

Activities:

- Configure income accounts.
- Validate court booking invoices.
- Validate non-member entry fee line.
- Validate ball machine rental invoice line.
- Validate draft invoice delete behavior.
- Validate posted invoice control behavior.
- Confirm scheduled-hours billing.
- Confirm actual-time audit fields.

Deliverables:

- Booking-to-invoice flow.

- Accounting posting readiness.
- Invoice linkage and audit validation.

Phase 5 - Inventory and Product Setup

Activities:

- Configure retail product categories.
- Create retail products.
- Add costs and sales prices.
- Configure stockable goods.
- Add initial quantities.
- Configure reorder rules for high-volume items.
- Configure vendors where available.

Deliverables:

- Product master.
- Initial stock quantities.
- Inventory demo flow.

Phase 6 - Purchase Setup

Activities:

- Configure vendors.
- Configure vendor prices.
- Create sample RFQs and purchase orders.
- Receive stock into inventory.
- Create vendor bills.
- Validate purchase-to-accounting flow.

Deliverables:

- Purchase replenishment process.
- Vendor bill workflow.

Phase 7 - Sales Setup

Activities:

- Configure sales quotation flow.
- Validate sales order for retail products.
- Validate invoice from sales order.
- Validate customer sales history.
- Configure optional quotation templates for group/corporate use.

Deliverables:

- Retail and customer sales flow.
- Sales-to-invoice process.

Phase 8 - POS Setup

Activities:

- Configure POS shop/session.
- Configure POS product categories.
- Add retail products to POS.
- Configure payment methods.
- Validate POS sale.
- Validate inventory deduction.
- Validate accounting entry generation.

Deliverables:

- Front desk POS process.
- POS retail checkout demo.

Phase 9 - Barcode Setup

Activities:

- Confirm barcode format policy.
- Add barcodes to products.
- Validate product scanning in POS.
- Validate scanning during inventory receipt.
- Validate barcode label needs.

Deliverables:

- Barcode-ready product master.
- Barcode scan demo flow.

Phase 10 - CRM Setup

Activities:

- Configure CRM stages.
- Configure lead sources.
- Create sample opportunities.
- Validate lead-to-contact/customer conversion.
- Validate quote or membership follow-up process.

Deliverables:

- CRM pipeline.

- Membership and sales inquiry flow.

Phase 11 - Reports and Dashboards

Activities:

- Validate booking analysis pivot.
- Validate booking analysis graph.
- Validate list view report.
- Validate dashboard operational queues.
- Validate accounting and sales reports.
- Validate inventory and POS reports.

Deliverables:

- Reporting pack for demo.
- Operational dashboard review.

Phase 12 - Testing and User Acceptance

Test scenarios:

- Book person/hour court seat.
- Book court/hour full court.
- Attempt overlapping booking.
- Attempt past booking.
- Attempt early start before 15-minute buffer.
- Start play within allowed buffer.
- End play.
- Mark no-show.
- Cancel with reason.

- Create booking invoice.
- Delete draft invoice and confirm buttons return.
- Create membership invoice from contact.
- Confirm one active membership rule.
- Sell retail product through POS.
- Create sales order and invoice.
- Create purchase order and receive stock.
- Scan barcode in POS or inventory flow.
- Create and progress CRM opportunity.

Deliverables:

- UAT checklist.
- Issue log.
- Sign-off document.

Phase 13 - Training and Handover

Training topics:

- Court dashboard usage.
- Booking lifecycle.
- Membership invoicing.
- Retail sales and POS.
- Inventory receipts and adjustments.
- Purchase order processing.
- Accounting invoice/payment flow.
- CRM lead management.
- Reports and dashboard review.

Deliverables:

- User training session.
- Admin handover.
- Basic user guide.

16. Out of Scope for Current Demo

The following are not included in the current demo scope unless separately approved:

- Family member eligibility automation.
- Online portal booking.
- Website checkout for bookings or memberships.
- Payment gateway integration.
- Automated recurring membership billing.
- Court lighting/access-control integration.
- Advanced coaching/lesson scheduling.
- League/tournament management.
- Payroll.
- Advanced multi-location inventory.
- Complex barcode label printing templates.
- Custom mobile app.

17. Assumptions

- The club will provide final court list, product list, pricing, vendors, and accounting mappings.
- Membership naming will be enough for staff to identify member type/benefits.

- Family member handling will remain outside ERP for the demo.
- Billing is based on scheduled booking duration.
- Actual play time is stored for internal audit only.
- Court/hour bookings reserve the whole court.
- Person/hour bookings reserve only selected player seats.
- POS will initially be used for retail products.
- Court and membership invoicing will remain in their respective workflows for the demo.

18. Acceptance Criteria

The implementation is acceptable when:

- Users can book courts through the dashboard without overbooking.
- Users can clearly see available and booked time slots.
- Court/hour policy blocks the whole court.
- Person/hour policy allows seat-level booking.
- Invalid past bookings are blocked with clear validation.
- Start Play respects the 15-minute early-arrival buffer.
- End Play records actual stop time.
- No-show and overdue states are visible operationally.
- Booking invoices are accurate and linked to bookings.
- Membership plans can be created without manually opening product forms.
- Membership invoices can be created from contact screens.
- Contacts correctly appear under Members or Non-members.
- Retail products have cost, sale price, and inventory quantities.
- POS can sell stocked retail products.

- Purchase can replenish retail stock.
- Accounting can manage invoices, payments, and vendor bills.
- CRM can track new club opportunities.
- Booking Analysis report opens as pivot/graph/list and shows meaningful measures.

19. Risks and Controls

Risk	Control
Incorrect billing policy on court	Court configuration review before go-live.
Staff starts booking too early	15-minute buffer validation.
No-show bookings remain unattended	Operational dashboard and reminders.
Draft invoices deleted but booking not released	Invoice deletion reset behavior.
Membership duplicated for same contact/period	One-active-membership validation.
Product stock inaccurate	Inventory adjustment and receipt process.
POS sales not reducing stock	POS inventory integration testing.
Wrong revenue account	Accounting mapping review.

Risk	Control
Barcode mismatch	Barcode data validation before label use.

20. Recommended Next Steps

1. Review and approve this BRD/SOW.
2. Confirm standard module installation and access rights.
3. Finalize master data for courts, rates, memberships, products, vendors, and POS.
4. Complete configuration and remaining standard app setup.
5. Run end-to-end UAT using the scenarios listed above.
6. Prepare demo script for front desk, manager, inventory, POS, purchase, CRM, and accounting flows.
